hi,

You can pass values between forms using Parameters, Global Variable etc...

I'll use here Global Variable to explain you.

e.g:(I'm using emp and dept tables from the schema scott/tiger

Create a new form dept.

Create a new form emp.

Make a button on dept form.

Trigger :When-Button-Pressed

:GLOBAL.deptno := :DEPT.deptno; --Global var defined in formA

OPEN_FORM('emp');

Now in the emp form, create a trigger on emp block:

Trigger: When-New-Block-Instance

EXECUTE_QUERY;

Open the properties of emp block.

in the WHERE clause write this deptno = :GLOBAL.deptno

save both form and run the dept form.

Execute Query.

Click on the button in the dept for to open emp form.

When the emp form will open the query will be executed and the deptno 10 only will be populated in the form.

Note: Global variables exist throughout a forms session. Once defined in any form, we can use then anywhere in other forms.

Hopefully you can understand now how to pass values between the forms.

Regards

Hi Raj,

i know that how to pass value between forms in Forms 6i.

You have to create parameters in forms & pass that value while calling forms.

In forms help just type..." passing parameters between forms "

& follow the example..u will get solution..
